

# Fast and automated filing and clinical coding.

---

Accurate and efficient filing and Read Coding with **Intellisense**.

# Saving your practice hours a day in **filing and Read Coding**.

Intellisense is a Clinical Content Recognition system which helps speed up the filing process of incoming post. Patient details in a document are highlighted and automatically populated into the fields needed to file the document.

Letters are clinical coded accurately and quickly to maximise QOF points. The software scans the letter and presents Read Codes to the user working seamlessly with the patient record.

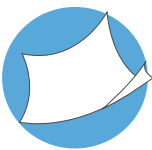

Save hours  
of filing  
time

Automated  
clinical  
coding

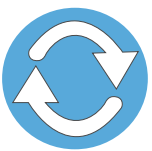

Increased  
filing  
accuracy

**Clinical content recognition** software which identifies patient details in documents for you.

**Have consistent data entry** for each patient letter with set data filing fields.

**Reduce administration tasks** and redeploy your practice resources elsewhere from faster working.

**Read coding and summarising** is made easier with access to previously used Read Codes without leaving Docman.

“ **Hassle free** and requires minimum amount of work. Intellisense **does the job for you.** ”

Anita Bains, Lower Gornal Medical Practice

### **Patient Identification**

Intellisense extracts patient demographic information from a document such as the NHS/CHI number, forename, surname and date of birth. This information is then used to match the document with the correct patient.

### **Document Identification**

Intellisense scans the text of a document, looks for keywords and uses pre-defined templates to assign the document with an accurate and detailed description. The information captured can include clinic date, letter type, hospital, department and consultant.

### **Read Code Identification**

Having filed the document into the clinical record, Intellisense will search for diagnosis, procedure and Value Read Codes within the document.

### **No duplication**

Intellisense will alert you if you try to add a code that is already part of that patient's record, allowing it to be added as a review of that problem instead. Intellisense will also alert you if you select a similar code to one already present in the patient's record.

**save 30  
seconds per  
document with  
Intellisense**

You take care of the patients.  
We'll take care of the documents.

“ Intellisense saves quite some time in terms of not having to look for the correct patient or department for example. We estimate that Intellisense saves 30 seconds to a minute per document and with 650 letters a week that soon adds up! ”

Ed Longridge, Chilwell Valley and Meadows Surgery

“ Intellisense has made a significant improvement to the speed and accuracy of filing and summarising in our practice. In result we have no problems with QOF and are 100% confident our data is correct and that we always use the correct Read Codes. ”

Roger Townson, Ash Trees Surgery

“ I love Docman because it is a very efficient system, I especially love the way Intellisense speeds the task of summarising! ”

Christine Dent, Stakes Lodge Surgery
