

Providing access to patient primary care documents at the point of care

Docman Share supports health economies achieve their Sustainability and Transformation objectives and Local Digital Roadmap.

The GP patient record provides a comprehensive view of a patients' interactions with the Health Service. An essential component of that record is the clinical correspondence and documentation associated with the patient's episodes of care.

A clinical medical record is incomplete without having access to the patients' clinical documents.

These documents contain important clinical content with a rich narrative providing clinicians with a fuller context of a patient story.

Docman share provides access to primary care clinical documents and information across different healthcare settings.

Improved patient care

Aiding clinical decision making

Reducing clinical risk

Supporting Integrated Care models

Making patients medical information available to healthcare professionals

Docman Share provides secure access to Docman clinical documents stored as part of the primary care GP record ensuring professionals have a complete view of a patients' clinical documents.

Docman Share works with all versions of Docman and can be delivered through a Shared Care Record Portal, the Docman web based viewer or directly into electronic patient record systems.

How is Docman Share used?

Docman Share can be used in any model of care that requires access to a shared patient record including:

- Federated working
- Out-of-Hours
- Locality Hubs
- Pharmacists
- Ambulance Services
- A&E
- Urgent Treatment Centres
- Extended Hours Services
- 7 day access to Primary Care
- Multi-Community Providers

Greater interoperability

Docman Share is used through a clinical portal as part of a wider shared care record or a clinical record in a smaller scale EPR system. We currently work with a number of partners including:

Docman Share supports Integrated Care by ensuring information is available to professionals across care settings

Improved patient care

All correspondence received by a practice, from any provider can be shared to ensure the complete clinical record.

Reduce risk

Access to the latest version of any document can support and improve clinical decision making and therefore reduce clinical risk.
